                                                                                                                                                                                                                       101700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SMISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP

It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Submitted (13-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 6, 2002 this sequence version replaced gi:23664632.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rattus norvegicus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).

NOTE: This is a "working draft" sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Center project name: GMPP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           268607
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          268727
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      649

The AIR polypeptides and polymucleotides can be used in methods for the diagnosis and treatment of diseases related to immune maturation and regulation of immune response towards self and nonself. They can be used particularly in the diagnosis and treatment of autoimmune polygendocrinopathy candidiasis ectodermal dystrophy (APECED) (also known as autoimmune polyglandular syndrome type I (APS I))

The AIR polypeptides and polynucleotides can be used in methods for the diagnosis and treatment of diseases related to immune maturation and regulation of immune response towards self and nonself. They can be used particularly in the diagnosis and treatment of autoimmune polyendocrinopathy candidiasis ectodermal dystrophy (APECED) (also known as autoimmune polyglandular syndrome type I (APS I))
                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

The AIR polypeptides and polynucleotides can be used in methods for the diagnosis and treatment of diseases related to immune maturation and regulation of immune response towards self and nonself. They can be used particularly in the diagnosis and treatment of autoimmune polyendocrinopathy candidiasis ectodermal dystrophy (APECED) (also known as autoimmune polyglandular syndrome type I (APS I))

New polypeptide which co-segregates ä mutated

Claim 1; Fig 2A; 77pp; English

polypeptides co-segregate with autoimmune polyendocrinopathy candidiasis cocodermal dystrophy (APECED). The invention provides vectors and host cells for preparation of APGDI polypeptides. APECED-associated mutations found in the APGDI gene include: an insertion of 4 nucleotides (CCTG), normally found at position 1086-1089, at nucleotide position 1085 or 1090 c; an insertion of an adenosine at position 1284; an insertion of a cytosine at position 1355; a deletion of nucleotides 1085-1097; a cytosine at position 1355; a deletion of nucleotides 1085-1097; a cytosine at position 1309 or 1313; a cytosine to thymidine exchange at position 358; an adenosine at position 368; a guanosine to thymidine exchange at position 358; an adenosine to guanosine to thymidine exchange at position 358; an adenosine to guanosine exchange at position 1052; and a cytosine to adenosine to adenosine to position 1094. A cytosine to adenosine exchange at position 1052; and a cytosine to adenosine exchange to position 1094. A cytosine to adenosine exchange to position 1094 and cytosine to adenosine exchange to position 1094. A cytosine to adenosine exchange to position 1094. A cytosine to adenosine exchange to position 1094 and cytosine to adenosine exchange to position 1094. A cytosine to adenosine exchange to position 1094 and cytosine to adenosine exchange to position 1094. A cytosine to adenosine exchange to position 1094 and cytosine to to thymidine exchange to thymidine excha This is the nucleotide sequence of human autoimmune polyglandular disease type 1 (APGD1 or AIRS) cDNA. It is a composite of 2 clones, which were obtained from a human adult thymus cDNA library by PCR (see AAYS669-10) and of a 3'UTR extension PCR product. The encoded protein (see AAY06073) is a transcription factor or transcription associate discort that may associate with vimentin fibres, perhaps as part of a docking mechanism regulating nuclear translocation. Aggregates of the mutated protein may prevent formation of vimentin intermediate filaments. Mutated APGD1 therapy or 1090

Sequence 2245 BP; 419 A; 765 C; 697 G; 364 T; 0 U; 0 Other;

Claim:6; Fig 14A-C; 77pp; English.

This is the nucleotide sequence of murine AIRE cDNA. Murine AIRE is the homologue of the human AIRE (or autoimmune polyglandular disease type 1, APGDI) gene (see AAX58605). The overal nucleotide sequence identity between the mouse AIRE coding sequence and that of the human is 76.67%. The mAIRE gene was localised to chromosome 10. Human mutated APGDI cosegregates with autoimmune polyendocrinopathy candidiasis ectodermal dystrophy (APECB). The murine homologue may be used to develop an animal model for APECBD, to examine the events that lead to the development of APECED and possibly to develop agents for preventing and/or treating this autoimmune disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5
The invention relates to human chromodomain, helicase, DNA-binding 5 CC (CHD5; ADH12180) and cDNA encoding it (ADH12179). CHD5 is a novel member of the CHD gene family, members of which have a profound effect on cof the CHD gene family, members of which have a profound effect on the coff that is tructure and gene expression and which are thus likely to play cofficient in the comprises two N-terminal zinc finger domains of the PHD companies of the CHD5 comprises two N-terminal zinc finger domains of the PHD companies of the CHD5 companies of the PHD contains a predicted DEAH-box-type helicase domain and a putative SNF2 commain, and several nuclear localisation signals. The gene encoding CHD5 is located on chromosome 1p56.3, a region frequently deleted in a variety coff cancers including neuroblastoma, and the protein is preferentially capterssed in brain. CHD5 is therefore thought to be a modulator of normal neural development and neoplasias of neural tissue origin. The invention calso relates to vectors and host cells comprising the CHD5 cDNA sequence, an antibody against CHD5; a method of screening for modulators of CHD5 cativity; a method of diagnosing cancer in a patient, where a reduced companies of CHD5 or CHD5 or CHD5 nucleic acids indicates the presence of CHD5 countered and companies of chost calls cancer a reduced continue of the companies of the presence of CHD5 or CHD5 nucleic acids indicates the presence of CHD5 countered countered and countered coun
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; chromodomain helicase DNA-binding 5; CHD5; chromosome 1p36.3; chromatin structure; chromatin unwinding; DNA repair; DNA recombination; transcriptional regulation; gene expression; cell cycle control; development regulation; oncogenesis; brain; neural development; neural tissue neoplasia; diagnosis; cancer; neural cancer; neuroblastoma; breast cancer; colon cancer; liver tumour; germ cell tumour;
